That is interesting that EPA's Dive Team wants to do the full inspection. I guess it would be ok, the only issue would be subsequent inspections. We would probably want to do this type of inspection once a year or once every two years. Since the PRPs are required to reimburse EPA for this work, they may want to do it on their own. My understanding is that the PRPs would have first choice of doing the work with EPA oversight. We will discuss at 10:00 am. CAS

Carlos – considering using EPA Dive Team to do rest of underwater inspection – we can discuss at 10.

Subject: Proposed dates for San Jacinto sampler placement

Gary,

The Dive Team would like to propose the week of April 4th for sampler placement at San Jacinto. Are you leaning towards asking us to also perform a more complete inspection of the cap during this same trip? We could complete this task during the same trip by adding two or three days of work.
